

How to attach safety strap to your press (not pre-cut)

Before you begin, ensure that the steel bed is in the press and the acrylic sheet is between the bed and top roller.

1. Loosen the two screws at the end of the bed where the strap is detached
2. Pass the safety strap under the bottom roller but over all the cross bars. See diagram below

3. Put the safety strap between the brass block and the other end of the bed, making sure there are no twists in the strap.
4. Roll the bed back to its full extent until the brass block hits the bottom roller and the strap is tight.
5. Leave 100mm of strap hanging out. Cut at this mark.
6. Fold the strap over the same as the attached end, tighten the screws.
